

INTERNATIONAL CONFERENCE ON HIGH-PERFORMANCE COMPUTING, SIMULATION AND BIG DATA

27 & 28 June 2017 - Ecole Polytechnique, Palaiseau, France

Teratec Forum 2017

A major event in France and Europe, the annual Teratec Forum brings together top international experts in HPC, numerical simulation and big data. Some 1,300 industry and research leaders in the computing field are expected to attend the twelfth session of Teratec Forum to be held in June in Palaiseau, France.

The participation and experience of senior figures in the industry, presentations by leading tech firms, diverse and top-notch technical workshops, highly relevant exhibitors and innovative offerings are major attractions for those interested in numerical simulation, high-performance computing and data mining.

The Teratec Forum is also the occasion for public officials to demonstrate their role in supporting French and European R&D programs for these technologies which are profoundly transforming research and industry with completely new products and services.

This year, Teratec Forum will include:

- **Plenary sessions**, for an update on the most recent evolutions in major digital technologies and their economic impact, technological challenges and the diverse uses of numerical simulation and big data
- **Technical and application workshops** on emerging technologies and new areas for applying HPC and big data
- **An exhibition** covering the entire value chain of high-performance computing. Tech companies and innovative SMEs will present their latest achievements and demonstrate that even the most advanced of these technologies are accessible to SMEs.

Specific programmes at the Teratec exhibition:

- **SIMSEO**, highlighting the use of numerical simulation in businesses of all sizes;
- **European Research Café**, focusing on European research projects and initiatives;
- **Collaborative Projects**, demonstrating twenty collaborative research projects; and
- **Numerical Simulation Awards**, six awards will recognise outstanding achievements in numerical simulation, HPC and big data analytics: Start Up, SMEs, Collaboration between a Large Company and SMEs, Innovation, Personality of the Year in Simulation and Jury Prize.
