

FORUM TERATEC 2020:
The European Annual Meeting
for Simulation, HPC, Big Data and AI

To bookmark in your agendas:

For the past 15 years, the Forum Teratec has been praised as THE annual meeting place for high-performance computing (HPC) and numerical simulation and for most innovative processing technologies such as Big Data and Deep Learning (AI), as well.

The Forum Teratec provides a breadth of events: **plenary sessions** with participation and testimonials of major industry players and presentations by leading technology companies in the field, **technical workshops** on new application areas of Simulation, HPC, Big Data, AI and an **exhibition** of hardware, software and services offering, enhanced by the awarding of Numerical Simulation **Trophies**.

In 2020, the **Forum Teratec** will give particular focus on contributions of these technologies to the environment, personalized medicine, cybersecurity, and manufacturing industry, but also on the development of quantum computing, exascale architecture, and HPC in the Cloud. For the first time, it will host the **Village Startups** area to showcase the innovations of young companies as well as the **Europa Village** aiming to strengthen the European dimension of the event. In order to meet great expectations, the European authorities are setting up EuroHPC a large-scale programme which will ultimately represent an investment of more than €6 billion.
