Europe is on its way towards "Hybrid Qomputing"

Workshop organised and moderated by

Prof. Kristel Michielsen, Jülich Supercomputing Centre

Dr. Guillaume Colin de Verdière, International Expert in HPC, CEA

Dr. Jean-Philippe Nominé, HPC Strategic Collaborations Manager, CEA

- ▶ This workshop will demonstrate that the next step in high performance computing is the introduction of quantum accelerators (quantum processing units, in short QPU) into the computing centre in a modular fashion. Supercomputers and QPUs will allow scientists to perform hybrid quantum-classical computing which we will shorten as Hybrid Qomputing.
- ▶ We will first explain what kind of algorithms are possible with this new concept, what can be hoped for and what kind of limitations we will be facing. Then we will illustrate first (industrial) results on practical use cases showing the potential impact of Hybrid Qomputing.

5mn	Introduction : CEA
20mn	State of the Art: the promises and limitations of Hybrid Qomputing K. Michielsen, FZJ
20mn	Algorithms for Hybrid Quantum Computing & Applications Prof. Göran Wendin –CHALMERS
15mn	The Atos Quantum Program: Paving the way to quantum-accelerated HPC Jean-Pierre Panziera, ATOS
15mn	Modular Computing & QPUs Thomas Moschny, ParTec
15mn	Use-cases to demonstrate the added value of Hybrid Qomputing: the HPCQS portfolio Venkatesh Kannan , ICHEC
15mn	Quantum computing applications in natural sciences and material design Ivano Tavernelli, IBM Research – Zurich
15mn	Hamiltonian modelling of approximate path planning problems for hybrid algorithms Romain Kukla, Léo Monbroussou, Naval Group

DE LA RECHERCHE À L'INDUSTRIE

CEA Standpoint

Premiers processeurs quantiques passant à l'échelle et leurs applications

par Georges-Olivier Raymond, CEO, Pasqal

Pasqal est une Start-up française, créée en 2019, et qui développe des processeurs quantiques à partir d'une nouvelle technologie révolutionnaire. Elle va permettre à ce type de processeur de dépasser le stade de la preuve de concept et de traiter des cas d'usage industriels d'ici quelques années.

Nous présenterons cette technologie, basée sur la manipulation d'atomes froids par laser, ainsi que les problèmes qu'elle permet de résoudre.

Biographie : Georges REYMOND obtient son doctorat d'optique quantique en 2005. Ses travaux pionniers et fondateurs permettent d'explorer un domaine unique dans une optique quantique, une étape clé vers le développement d'un ordinateur quantique. Il a orienté ensuite ses recherches dans des domaines aussi variés que les biotechnologies, la défense ou les semi-conducteurs. Depuis 2015, reprenant ses travaux de thèse, il travaille à la création de la première entreprise française de hardware dédié au calcul quantique. Il fonde Pasqal en mars 2019.

After several workshops on/with **quantum computing** at TERATEC Forums, over the last years, organised or co-organised by CEA, with focus on emerging technologies, promising use cases....

- ▶ 2020 Quantum computing: what's new in QuBits?
- ▶ 2019 Quantum computing : which applications will benefit ?
- ▶ 2018 Quantum revolution is here
- ▶ 2016 Specialised computing architectures : helpers or challengers ?

... today we shift the gear and widen the scope towards a more global and European HPC/QC vision.

We are active in the community and in close relationship with most speaking entities today!

Très Grand Centre de Calcul du CEA Two main components

► Research Computing Centre GENCI's Joliot-curie, 22 PF

- Bound to be the French reference centre in terms of Quantum Computing public infrastructure, together with GENCI

- Starting with HPCQS EuroHPC project 

► Industry computing centre: CCRT Topaze, 9PF – Cobalt, 3PF

- Hosting an ATOS QLM since 2018 (31 qubits), in particular for industrial partners use cases (↔TERATEC TQCI)

► 1 pasqal machine @TGCC, 1 @ JSC/JUNIQ

- Quantum Simulator (analog)
- Neutral Rydberg atoms handled by laser (optical tweezers)

► Latest progress <https://pasqal.io>

- 100 qubits then 196 in the lab

► 2021

- Henrique Silvério, Sebastián Grijalva, Constantin Dalyac, Lucas Leclerc, Peter J. Karalekas, Nathan Shammah, Mourad Beji, Louis-Paul Henry, Loïc Henriët
Pulsar: An open-source package for the design of pulse sequences in programmable neutral-atom arrays
[arXiv](#)
- Giovanni Ferioli, Antoine Glicenstein, Loïc Henriët, Igor Ferrier-Barbut, and Antoine Browaeys
Storage and Release of Subradiant Excitations in a Dense Atomic Cloud
[Phys. Rev. X 11, 021031 \(2021\)](#) [[arXiv](#)]

► 2020

- Constantin Dalyac, Loïc Henriët, Emmanuel Jeandel, Wolfgang Lechner, Simon Perdrix, Marc Porcheron, Margarita Veshchezerova
Qualifying quantum approaches for hard industrial optimization problems. A case study in the field of smart-charging of electric vehicles
[arXiv](#)
- Pascal Scholl, Michael Schuler, Hannah J. Williams, Alexander A. Eberharter, Daniel Barredo, Kai-Niklas Schymik, Vincent Lienhard, Louis-Paul Henry, Thomas C. Lang, Thierry Lahaye, Andreas M. Läuchli, Antoine Browaeys
Programmable quantum simulation of 2D antiferromagnets with hundreds of Rydberg atoms
[arXiv](#)
