Our networks

Le HUB Quantique

Our future product

A universal quantum server

QUANTUM
CORE

With quantum μ processor (QPU)
based on FDSOI

To leverage the semiconductor industry's 60+ years of experience, we have a **fabless approach using commercial FD-SOI technologies**.

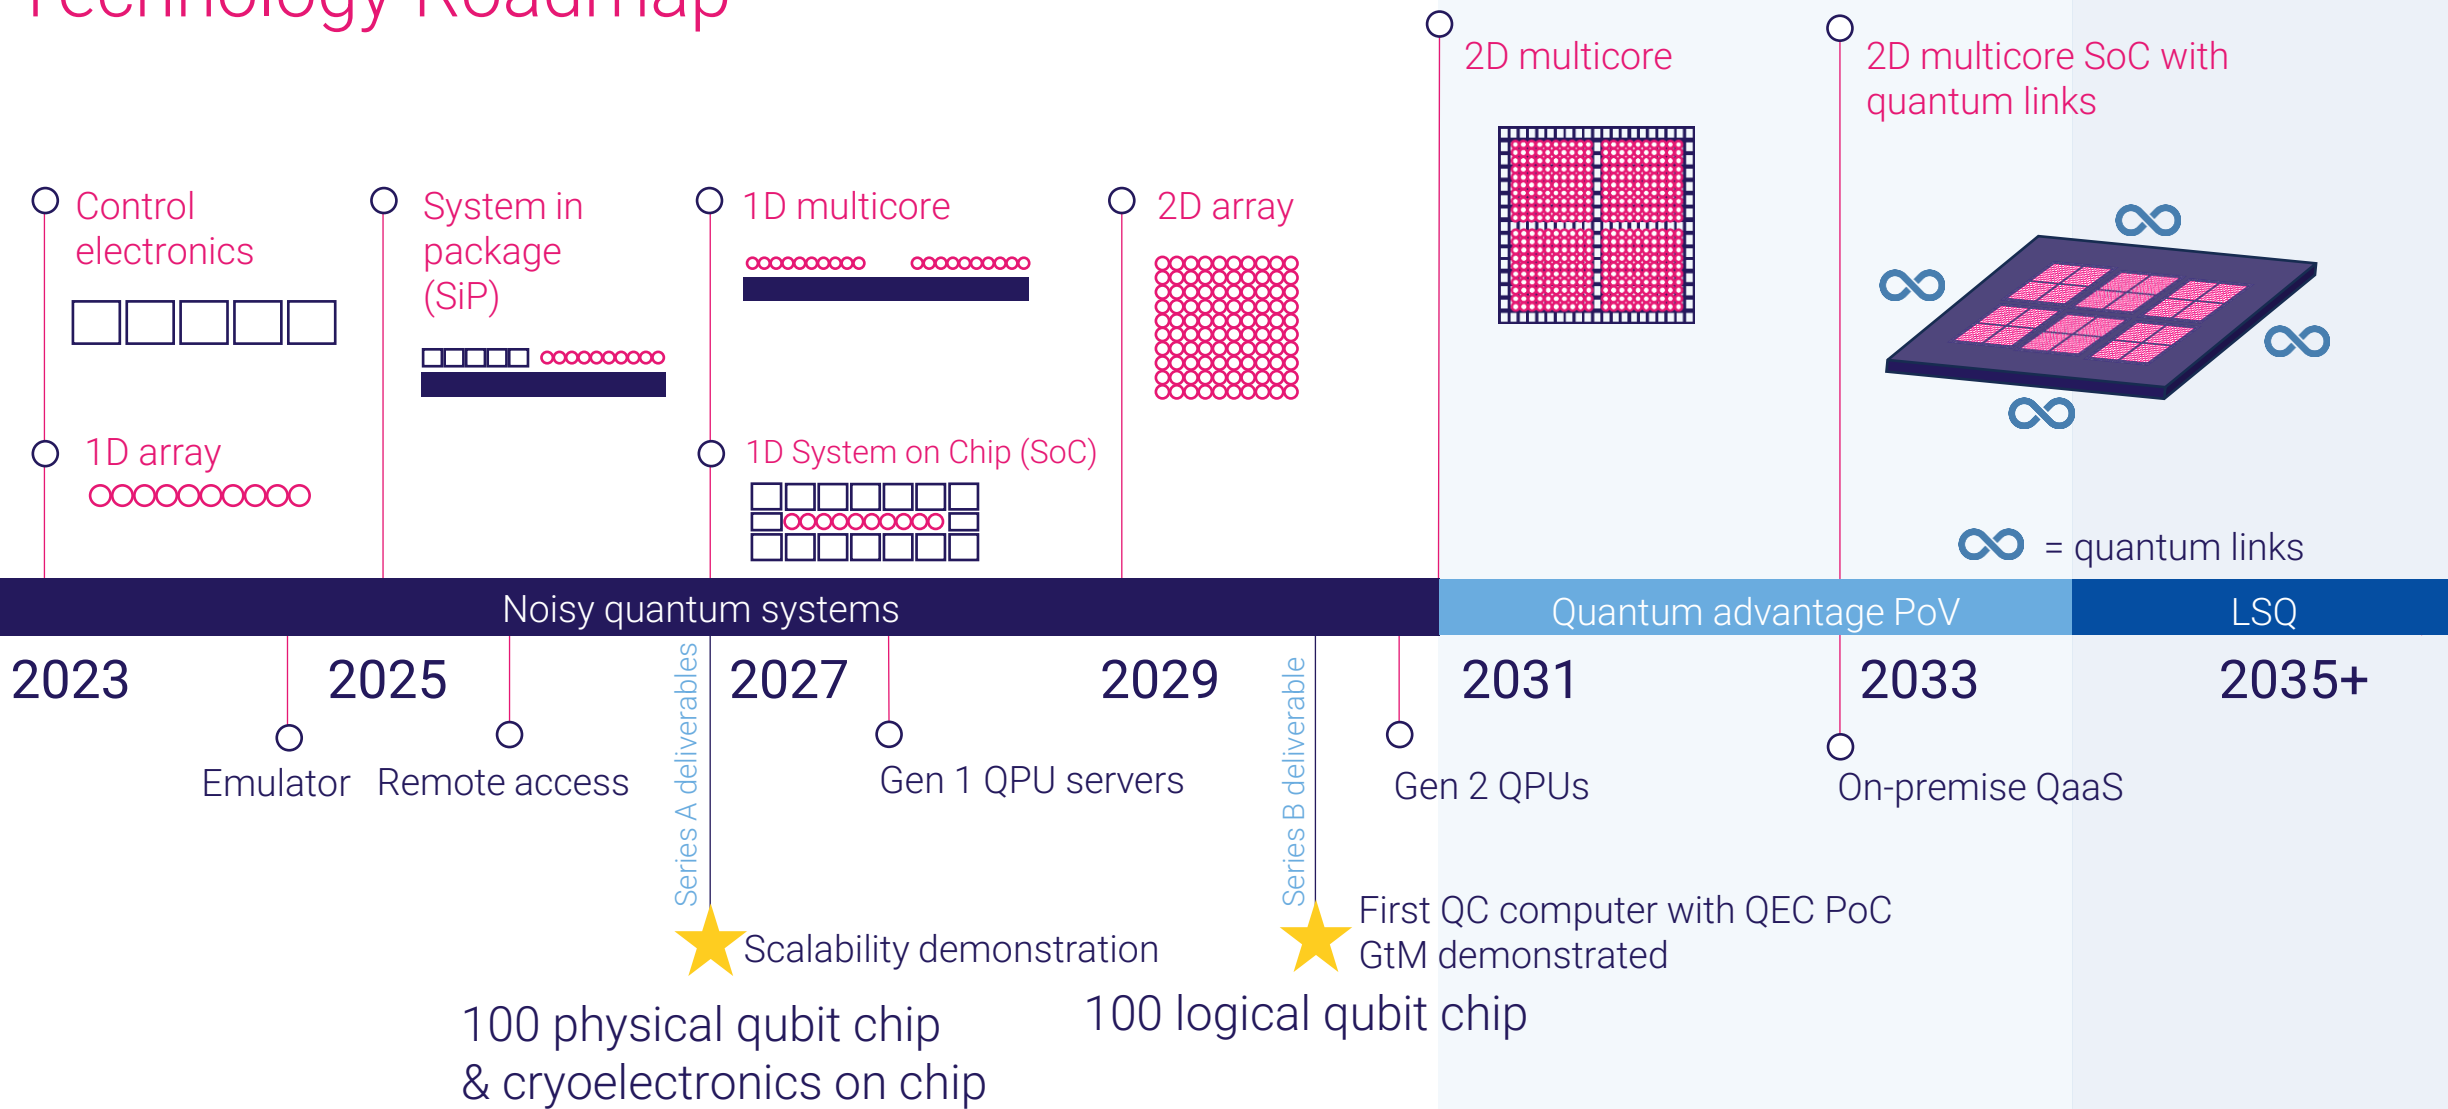

It's the **fastest and most cost-effective path**.

← Quantum integrated circuit in cryogenic environment

Protected by **40+** patents

Technology Roadmap

Product Roadmap

Evolution of our devices

Nanowire devices with series gates

Face-to-Face (FF) devices

FF with J-gates

FF with J-gates and trench cut

mK

Simulation Methodologies

Room temperature :

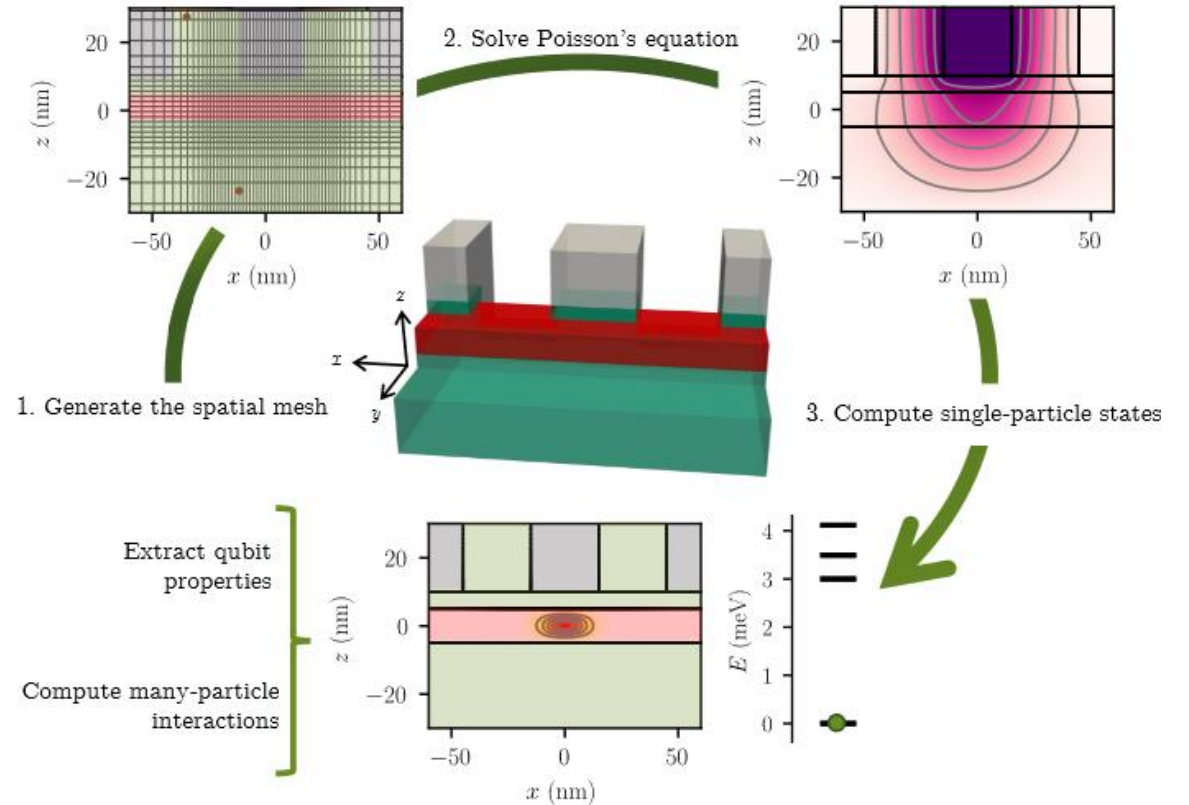

- Sentaurus software
- Leader in TCAD solutions for the microelectronic industry

SYNOPSYS®

Electron density

Low temperature Few electrons : TB-Sim, QTCAD

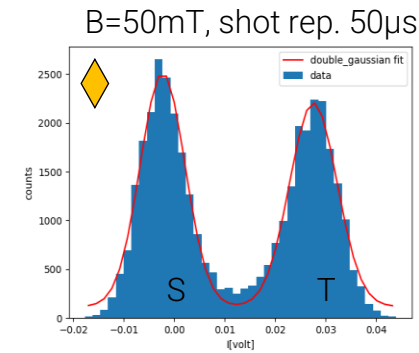

Individual qubit demonstrations

One qubit gate showing excellent performance

A. Crippa et al., Nature Com 2019
N. Piot et al., Nature Nano 2022
B. Klemt et al., Nature QI (2023)
B. Paz et al, IEDM 2024

Excellent results: over 98% single shot spin read-out

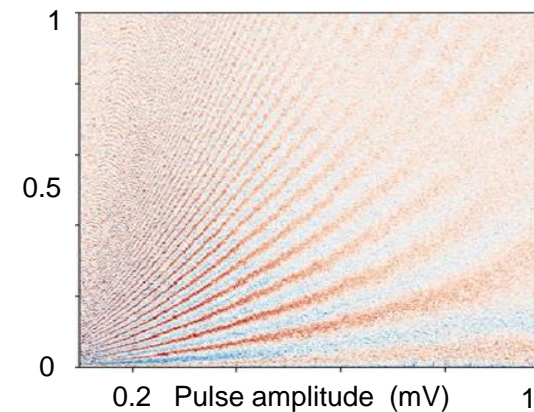

Urdampilleta et al., Nature Nano 2019
A. Crippa et al., Nature Com 2019
T. Lundberg et al., PRX 2020
D. Niegeman et al., PRX Quantum (2022)
V. El Homsy et al., Arxiv (2023)

Tunnel-coupling – highly promising results

B. Paz, SIQEW 2024
B. Paz et al, IEDM 2024

Achievement of a two qubit gate

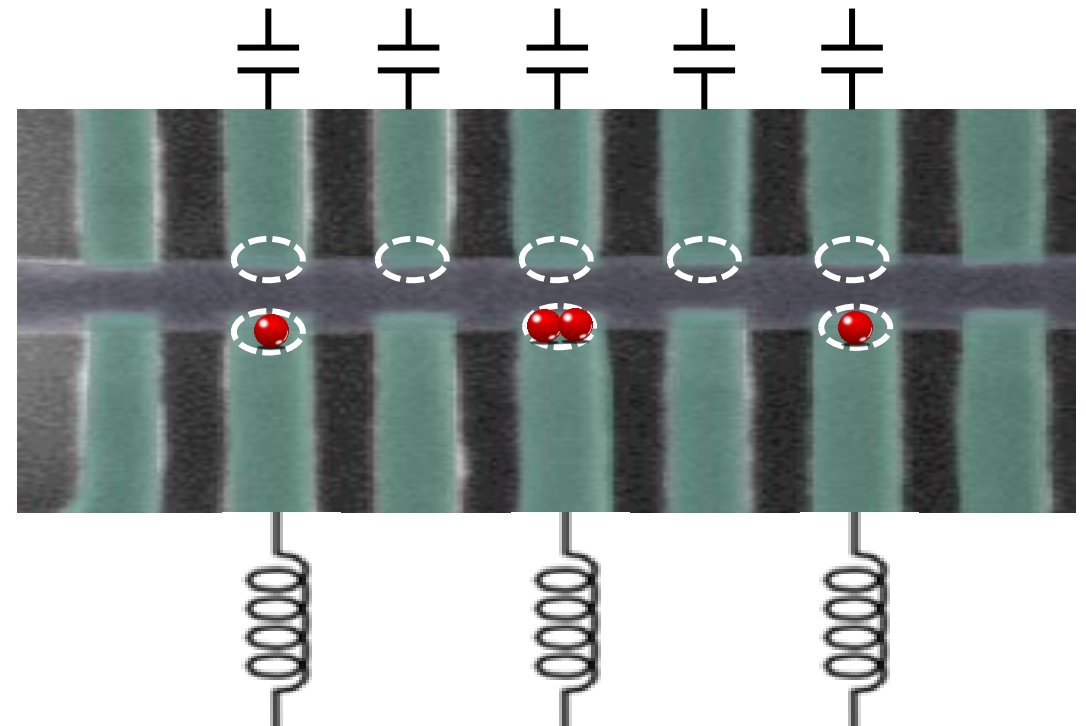

P. Hamonic et al, submitted 2024
P. Hamonic et al, in preparation
B. Paz et al, IEDM 2024

Up to 5x2 array of electron spins

2x2 array of electron spins

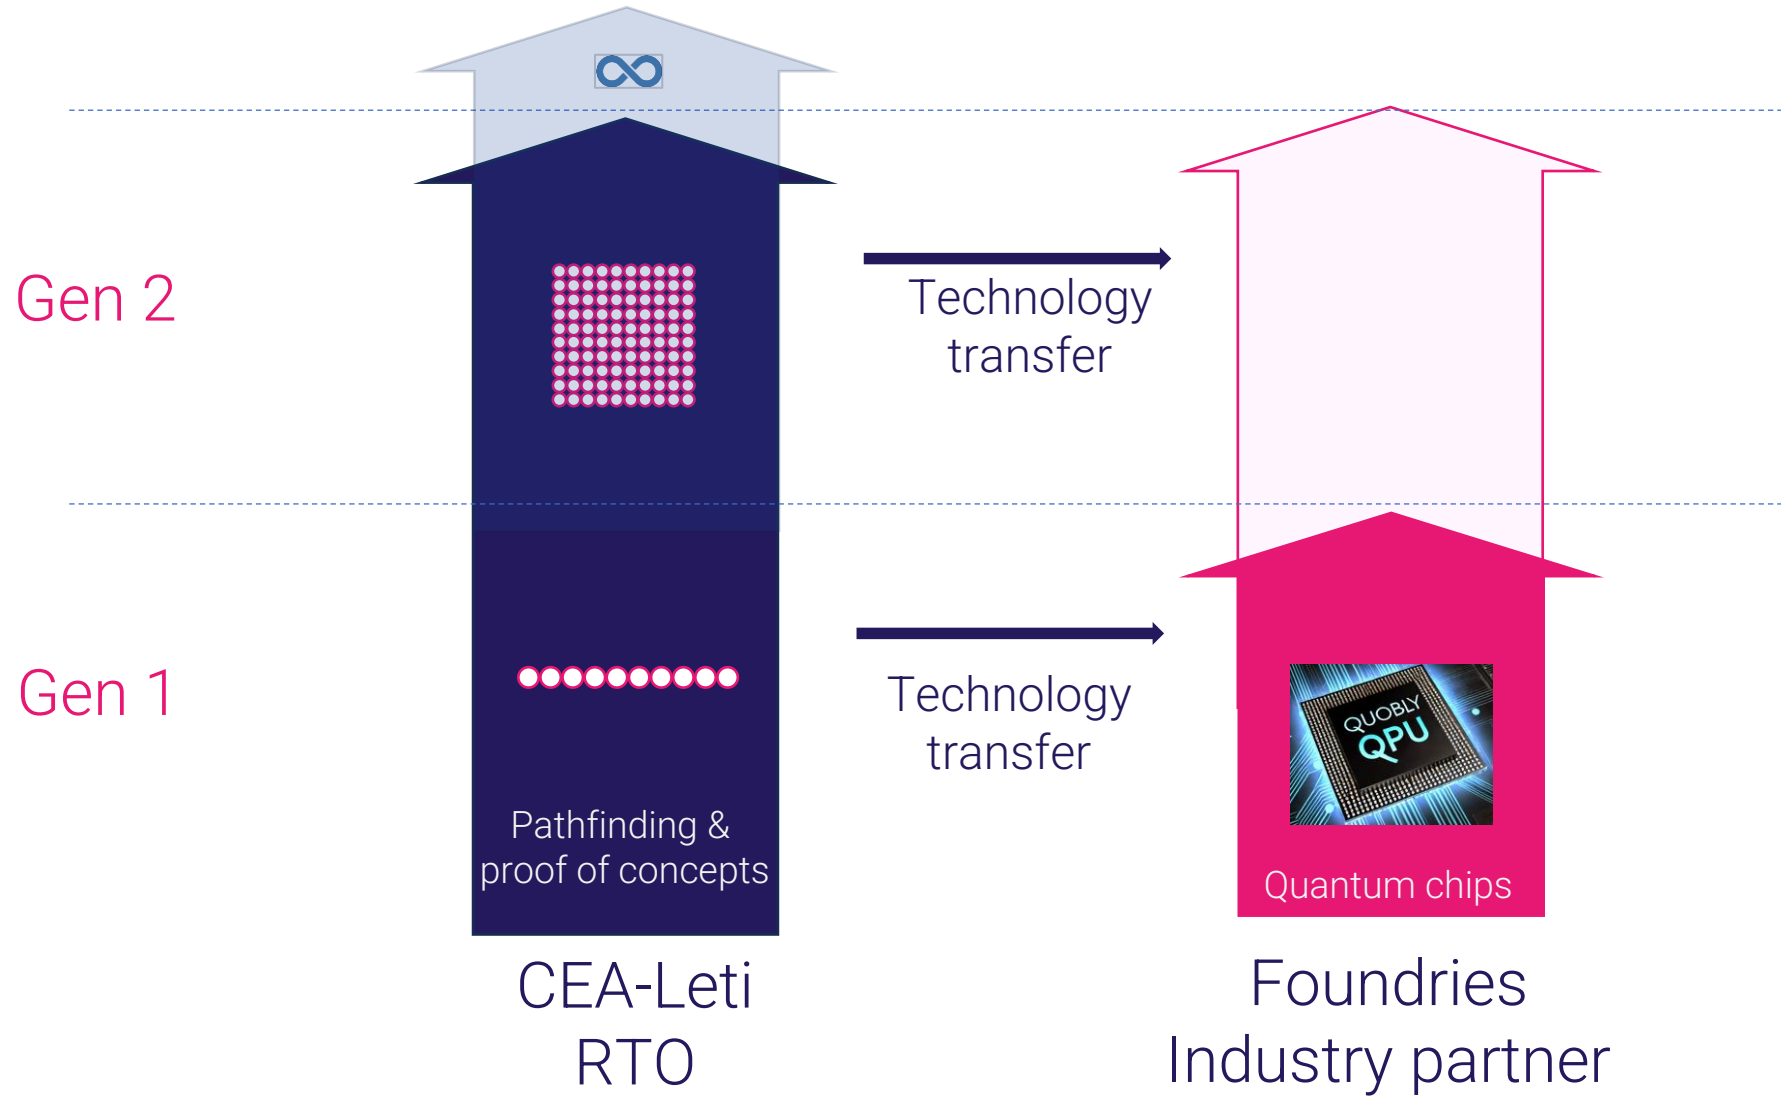

5x2 quantum dot array of electron spins

Two-qubit gate dynamics in 2x2 array

P. Hamonic et al, in preparation

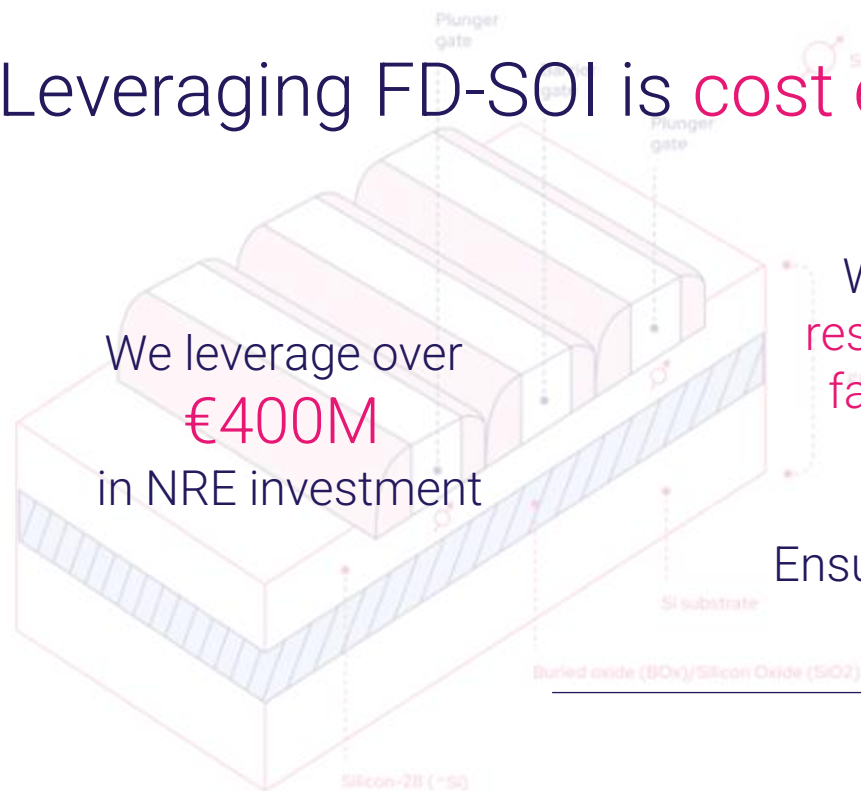

From RTO to Industry

HW and enabling partnerships

Si-28 substrate	   
EDA, simulation & modeling	   
Equipment	   
Foundries	 
R&D labs	 

Leveraging FD-SOI is **cost efficient**.

We leverage over **€400M** in NRE investment

We add qubits while respecting the stringent fabrication guidelines of FD-SOI

Ensures short qualification

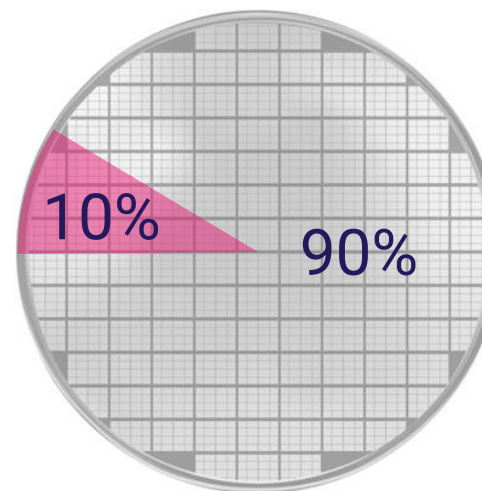

This makes our qubits:

- Cost efficient
- Large-scale production-compatible

QUANTUM CIRCUIT

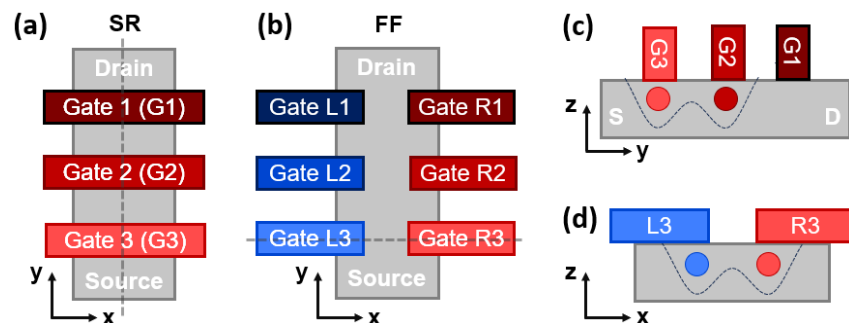

We modify **10%** of fab processes.

90% follow standard semiconductor processes & use standard EDA tools

Successful formation of coupled quantum dots in 22FDX® qubit devices

Quobly: G. Elbaz et al - SiQeW 2024

Using the commercial 22FDX® platform, we successfully show that we can form coupled quantum dots in devices expressly designed for spin qubits

QuDot and QuDot coupling in a SR device (G3/G2)

QuDot and QuDot coupling in a FF device (L3/R3)

Compact frequency multiplexed readout of silicon quantum dots in monolithic FDSOI 28nm technology

Leti: Quentin Schmidt, Quobly: T. Meunier et al - ESSERC 2024

This paper demonstrates the first on-chip frequency multiplexed readout of two co-integrated single-electron transistors without the need for bulky resonators.

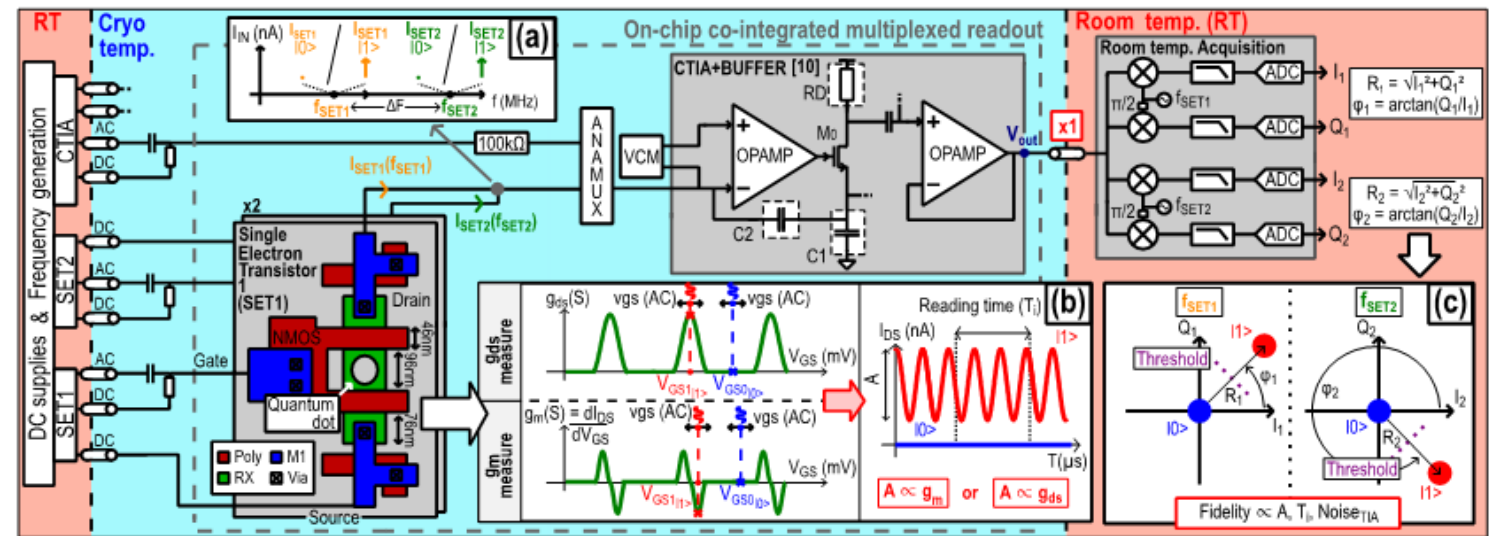

Fig. 2. Single electron transistors (SETs) geometry and block diagram of the proposed frequency multiplexed TIA-based readout. (a) Input signal frequency representation. (b) Illustration of the different measurable parameters. (c) Depiction of the thresholding algorithm for I/Q signals.

Take-away

- Quobly has the knowledge to deliver good qubits from a FD-SOI technology
- Quobly has an ecosystem to develop a scalable, industry-compatible version of its technology
- Having demonstrated qudot coupling in 22FDX and co-integration (CMOS and qudots) in FD-SOI 28nm, we have demonstrated critical milestones on the path to **large-scale, fault-tolerant quantum computing**

An ambitious vision for quantum computing.

A VIABLE PLAN FOR BRINGING IT TO LIFE.

Thank you!
